ABOUT US

SATISFACTION

We have built up the satisfaction and taste of our customers with our long-standing, vast experience. The growth strategy of our company is to proceed towards becoming a bigger company by manufacturing our products at a quality that best addresses the needs of our customers.

Artent has a capacity to significantly respond to the needs of the industry with its cutting-edge machines and manufacturing equipments in its 5000 m2 indoor integrated facility.

OUR INDISPENSABLE PRINCIPLES AND OUR PLANS FOR THE FUTURE

Our indispensable principle is “offering the best solution through top quality service”. To uphold this principle, we adopt an innovative perspective that follows and benefits from science and technology and offers rapid solutions to the needs of customers with a highlight on quality and reliability.

Customer satisfaction is one of our essential principles. We offer customized, quality, reliable, economic and rapid services with due diligence.

Our greatest plan and mission for the future is to set an example for all companies across the industry with our objectives established on the principles of employee satisfaction, customer satisfaction and service to industry.

HIGH QUALITY AND AUTHENTIC DESIGNS

Artent products are manufactured with due consideration of quality, authentic design and the comfort to be offered to users.

Our design mentality is adapting ourselves to the evolving taste, lifestyle and needs of customers and offer innovative solutions.

Artent continues to achieve its target of ensuring top quality with its awning systems, glass systems and other complementary products, and aims to successfully maintain its services with innovative steps day by day.

PERGOLA

PERGOLA

01 PERGOLA

PERGOLA

Pergola is an automatic awning system designed to convert cafés, restaurants, terraces, gardens, etc. outdoor areas into an indoor area. With its aesthetic and stylish design, it can make spaces usable for four seasons and brings added value to use these spaces at the ideal level of benefit.

It can be installed in adjacent or standalone areas, this allowing covering the area in an aesthetic and functional way. With its various models and wide range of colors, it allows using outdoor areas in the most efficient way.

Artent offers you various models for solution depending on the architectural structure of the application area. Pergola is often applied with front pillar support. Where front pillars are not wanted, the awning can be assembled on a wall with a suspension system, thus allowing you to enjoy the view without interfering with your vision. It can be applied with piers depending on the architecture of the area and decoration needs of the space. Piers add quality to the space with their strong and clean lines. The pergola system has been developed to cover very large areas in a spacious way. It can be applied independently with opening on two sides. Double-sided application expands the outdoor area in a creative way. All of these solutions, which will facilitate your life, have been designed in compliance with the pergola system.

Pergola offers desired permanent solutions in spaces with its modern lines, stylish appearance and aesthetic solutions. With its robust structure, it supports your life and focuses on your joy and comfort with its dynamism. With the modern and clean lines of its pergola systems, Artent improves the quality of your life, allows you to enjoy your living spaces in the best way with its refreshing design, and ensures you have a good time with its elegant look.

The company develops its product portfolio with awning motor varieties including motors with electronic or mechanical limit switches and electronic limit switch motors with receivers, as well as easy-to-use sensor control units, sensor sets, sensor systems, wired controlled units, wireless control units and accessories.

EQUIPMENTS

FABRICS

Artent uses imported architectural blackout fabric in its Pergola System. Blockout is a type of membrane comprised of high-quality PVC block which is covered for 5-year guarantee and which has all international quality documents and certificates. It is manufactured at the integrated facility in compliance with European standards.

Its durability in any weather condition contributes to energy saving, thus making it an eco-friendly product.

The fabric is manufactured in colors beige, white and gray as a standard, and the texture varies from plain to 3D patterns.

Blockout fabric is 100% watertight. The film layer in the fabric ensures effective protection for heat insulation.

The blockout filters ultraviolet beams of the sun, and ensures hot-cold weather balance in the application area to contribute to insulation. It has been designed to endure temperature ranges from -30* to +70*.

PVC based blockout fabric weighs 850 grams per m2, and it is a lacquered fabric (has a shiny surface). One of its most important features is fire-retarding. Thus it completely eliminates the potential for ignition of the fabric.

Its water-tight characteristic is the main reason for blockout fabric to be used in pergola systems. The fabric is assembled to the pergola system with rovings and gaskets to ensure high level of insulation. Thus is guarantees top level of water-tightness.

Blockout fabrics contribute to keep the application area cool in summer and warm in winter.

It also contributes to sound insulation. Architectural blockout fabrics ensure maximum level of resistance to heat, humidity and dirt. Its close weaving increases its strength, and high ratios of warp and weft prevents breaking.

LIGHTING

Artent highlights visual quality in your spaces. The most important complementary detail of the applied pergola systems is the ambient lighting.

We offer a wide range of lighting products with various models and colors in pergola systems.

Depending on your taste, drop-shaper (rounded) or stripe (horizontal) led options as well as daylight and white light according to the ambiance are available.

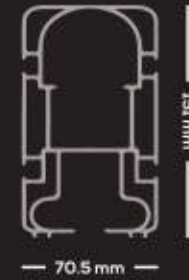

The advanced dimmer system allows adjusting the light density gradually in compliance with the ambiance.

Led technology offers an eco-friendly approach with energy saving and aims to fulfill the responsibilities for the environment.

OUR PRODUCTS

02
UPRIGHT
UPRIGHT

02 UPRIGHT

UPRIGHT

Upright is a dynamic awning system which can be designed at desired dimensions to bring a stylish and aesthetic look to external facades and pergola systems.

Upright can be controlled via an engine or manually, and it is a very practical and functional product. It is commonly preferred because it can be used in summer and winter. It is particularly preferred for restaurants, cafés and similar areas. The transparent, mica fabric prevents blocking the exterior view, and the screen fabric ensures shading.

It is used as an alternative where glass systems are not desired for the space. Upright has a modern and aesthetic look, and it is a solution that brings value to living spaces with its robust structure.

EQUIPMENTS

Artents uses screen and transparent mica fabric imported from Europe for its products.

Transparent mica is a watertight fabric made of 100% PVC with a thickness of 0-80 mm. It has a translucent and smooth structure like glass.

FABRICS

Screen is a technical material which is used indoors and outdoors as a sun-blind. The screen, which is made of woven yarn on the inside, is a plastic-coated on the outside, which makes it convenient for outdoor use.

When closed, it filters daylight to ensure energy saving and to create shaded areas. It offers solutions that integrate with the space with its vast color range.

MOTOR

Artent uses Somfy and Becker awning engines in its products. Somfy and Becker engines are manufactured in compliance with European standards, and they are certified for global standards. The engines can be integrated with all of our products, and all of the systems we manufacture can be used with remote control.

The Upright can be easily and practically controlled via smart engines.

Multiple awning systems can be controlled with a single remote control. This offers practical solutions in use.

OUR PRODUCTS

03

Zip screen is a highly-durable, practical automatic screen system which offers many benefits to the application area with its modern and stylish look.

It has been designed to create an ideal indoor climate to protect from intense sunlight in summer.

The aluminum frame of the Zip Screen has been designed to endure weather conditions in all four seasons. Zip Screen contributes to energy saving with heat control, and offers all of the expected benefits to the user.

With its vast application types, it has been designed as a combination of technology and imagination.

Zip Screen is compatible with any architectural structure with its colors that suit the decoration indoors and outdoors.

EQUIPMENTS

Artent uses imported screen fabric in its Zip Shade products.

Screen is a technical material which is used indoors and outdoors as a sun-blind. The screen, which is made of woven yarn on the inside, is plastic-coated on the outside, which makes it convenient for outdoor use.

FABRICS

When closed, it filters daylight to ensure energy saving and to create shaded areas. It offers solutions that integrate with the space with its vast color range.

Artent uses Somfy and Becker awning engines in its products.

MOTOR

Somfy and Becker awning engines are manufactured in compliance with European standards, and they are certified for global standards. The engines can be integrated with all of our products, and all of the systems we manufacture can be used with remote control.

The Zip Shade can be easily and practically controlled via smart engines.

EQUIPMENTS

We offer infinite options for acrylic fabrics in all of our awning models.

Acrylic fabrics bring exclusive and stylish solutions to your spaces with their vast color range. The fabrics are imported from Europe.

They are designed for outdoor use, and they are water-repellent and colorfast.

All fabrics are covered by 5-year guarantee.

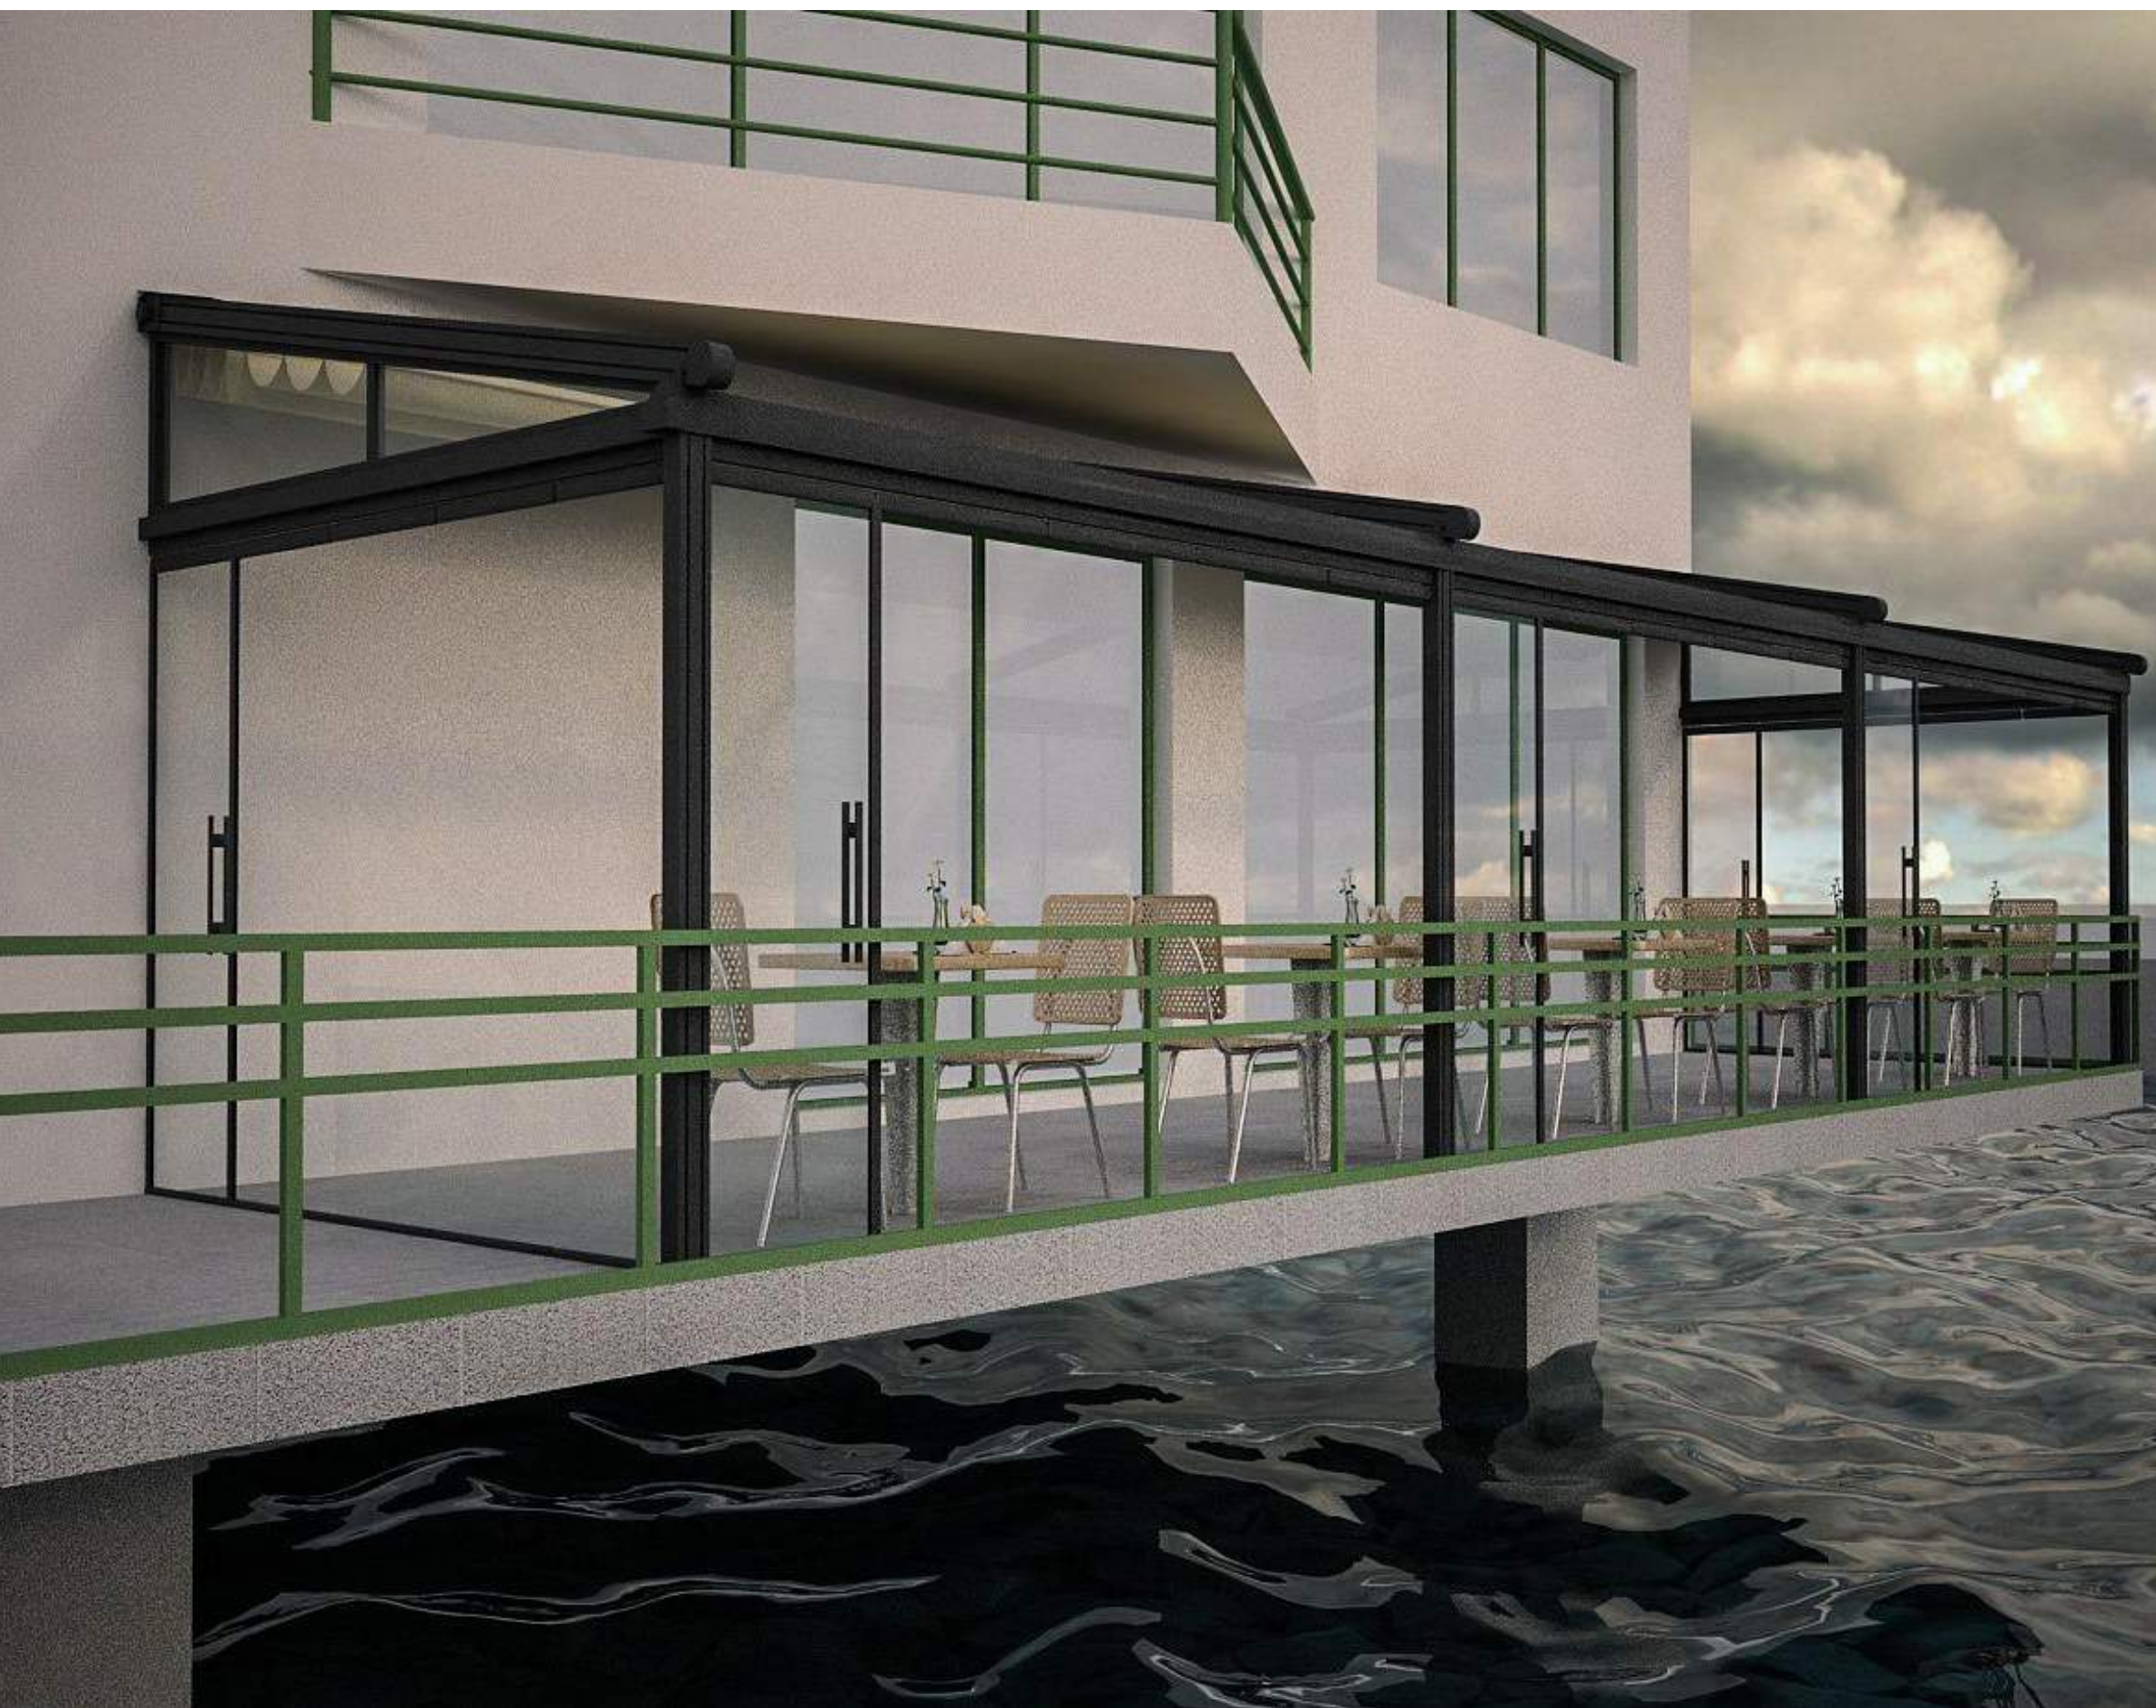

Artent uses Somfy and Becker awning engines in its products.

It allows operating the awning with a single touch of a remote control.

The engines in the systems are covered by 5-year warranty, and they are manufactured in compliance with the terms of international certifications.

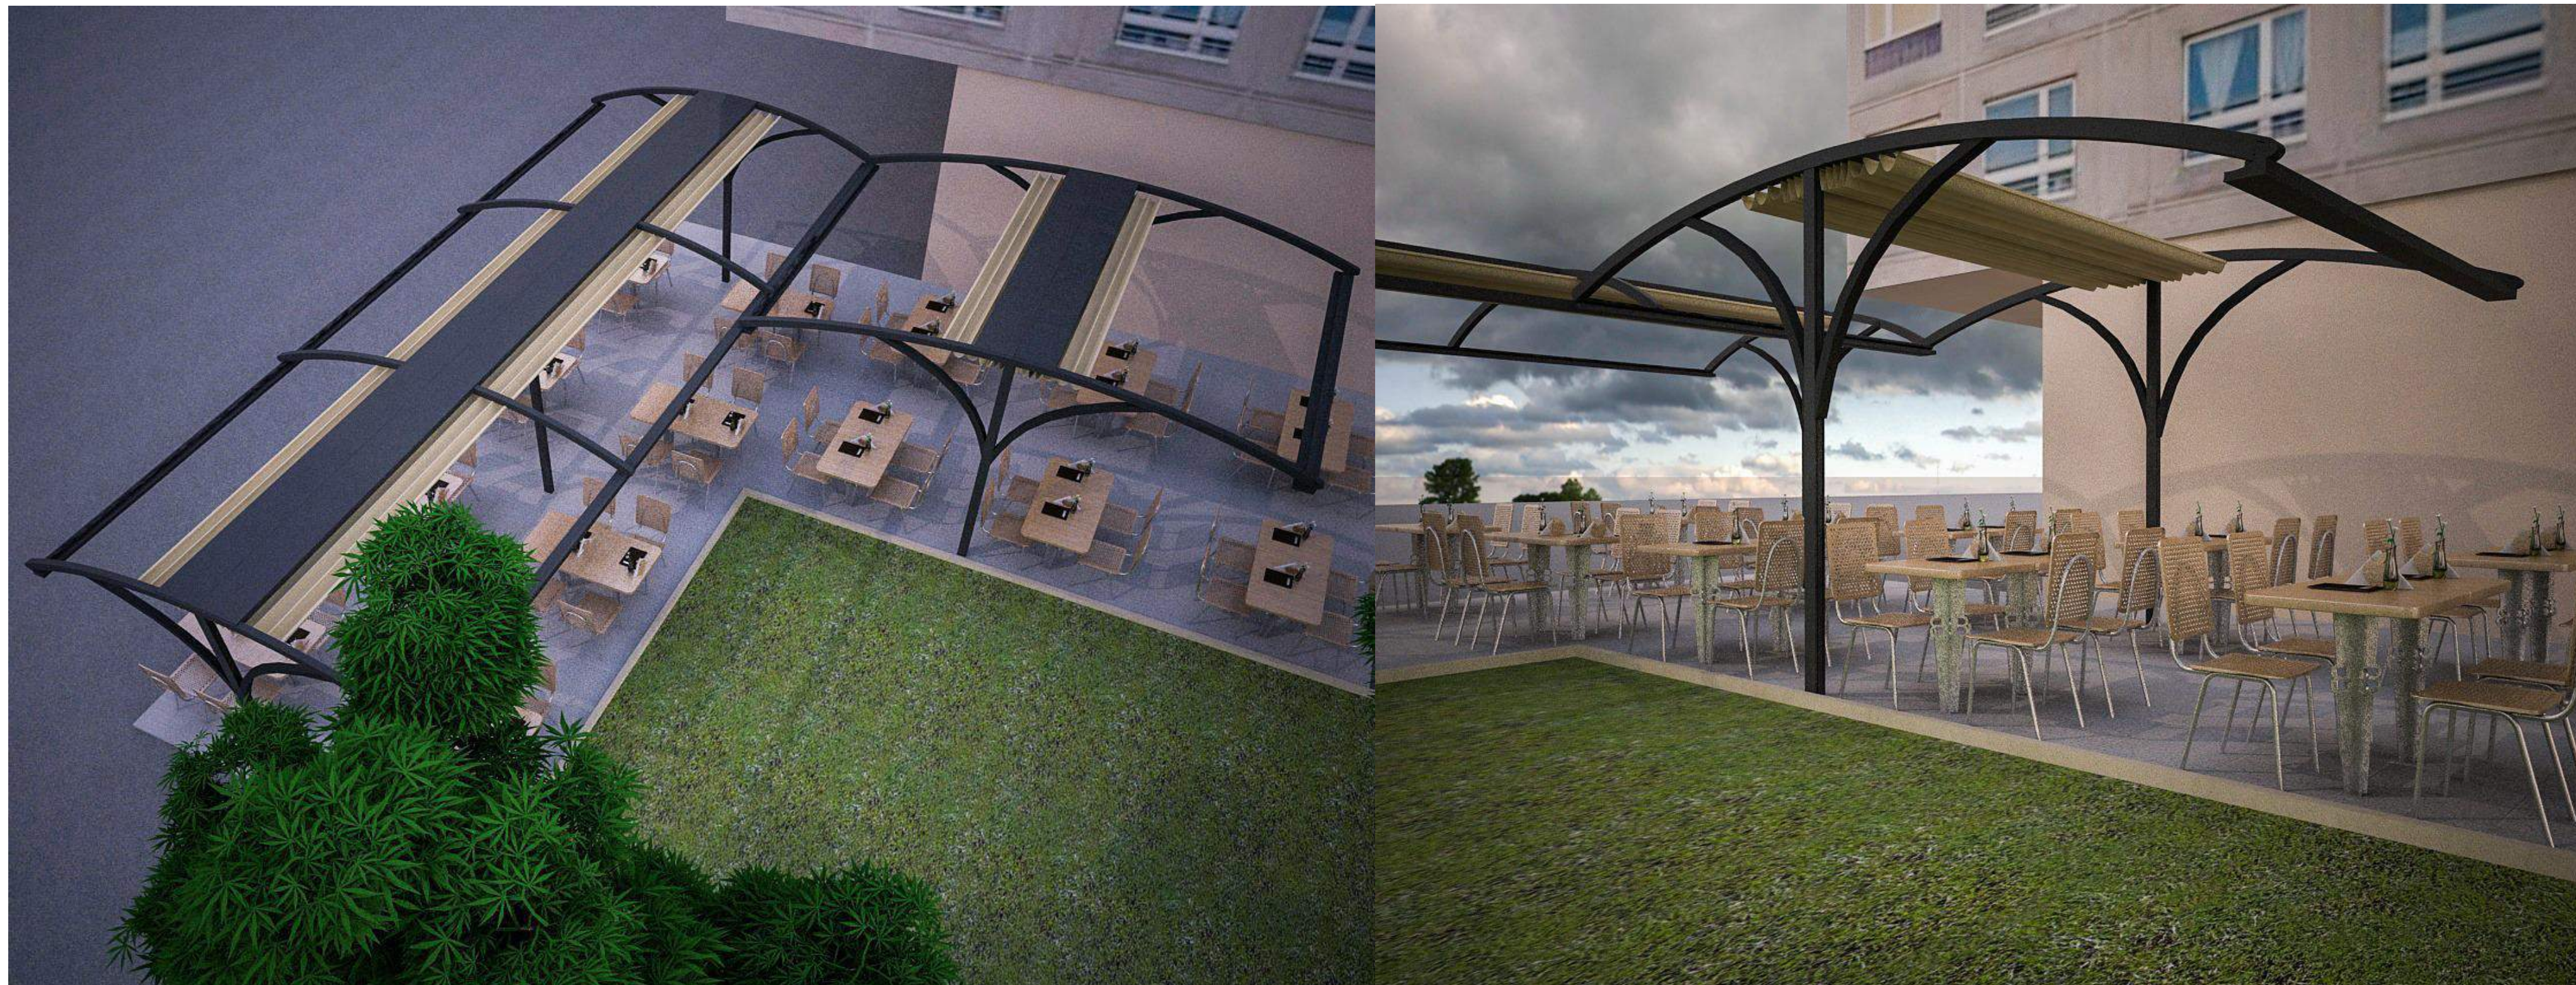

It can be optionally supported by a sun, wind and rain sensor. Thus, the awning can be automatically opened or closed at desired weather conditions.

LIFTED, NON LIFTED SLIDING GLASS

Sliding Glass Systems are applied as lifted or non-lifted, and they appeal to the eye with their decorative look and practical use. This system, which is typically preferred in cases where usage area is limited, operates in horizontal direction and allows working in a small area, thus making it more practical to use.

It is a system that combines homes, work places, cafés, restaurants, etc. spaces with the outside, creates convenient atmosphere for outdoor areas to be used in four seasons, adds to aesthetics with its modern look and bring freshness to its application area. It also helps heat and sound insulation by ensuring full protection against wind, noise, dust, snow, storm, etc. when closed.

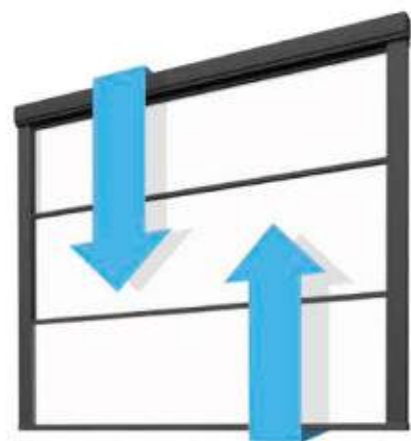

These systems, which can be moved freely regardless of horizontal or vertical records, offers unique visual integrity, without compromising from the view and landscape. It can be used in four seasons with its ergonomic design and fully folding structure. It offers superior performance without taking up space thanks to its panels that can be opened right, left or in both directions.

Sliding Glass Systems bring prestige to your space with its elegant structure, while contributing to the decoration with profile and glass paint options according to your concept. It allows enjoying the atmosphere without blocking the outside view, and offers different experiences with its comfort.

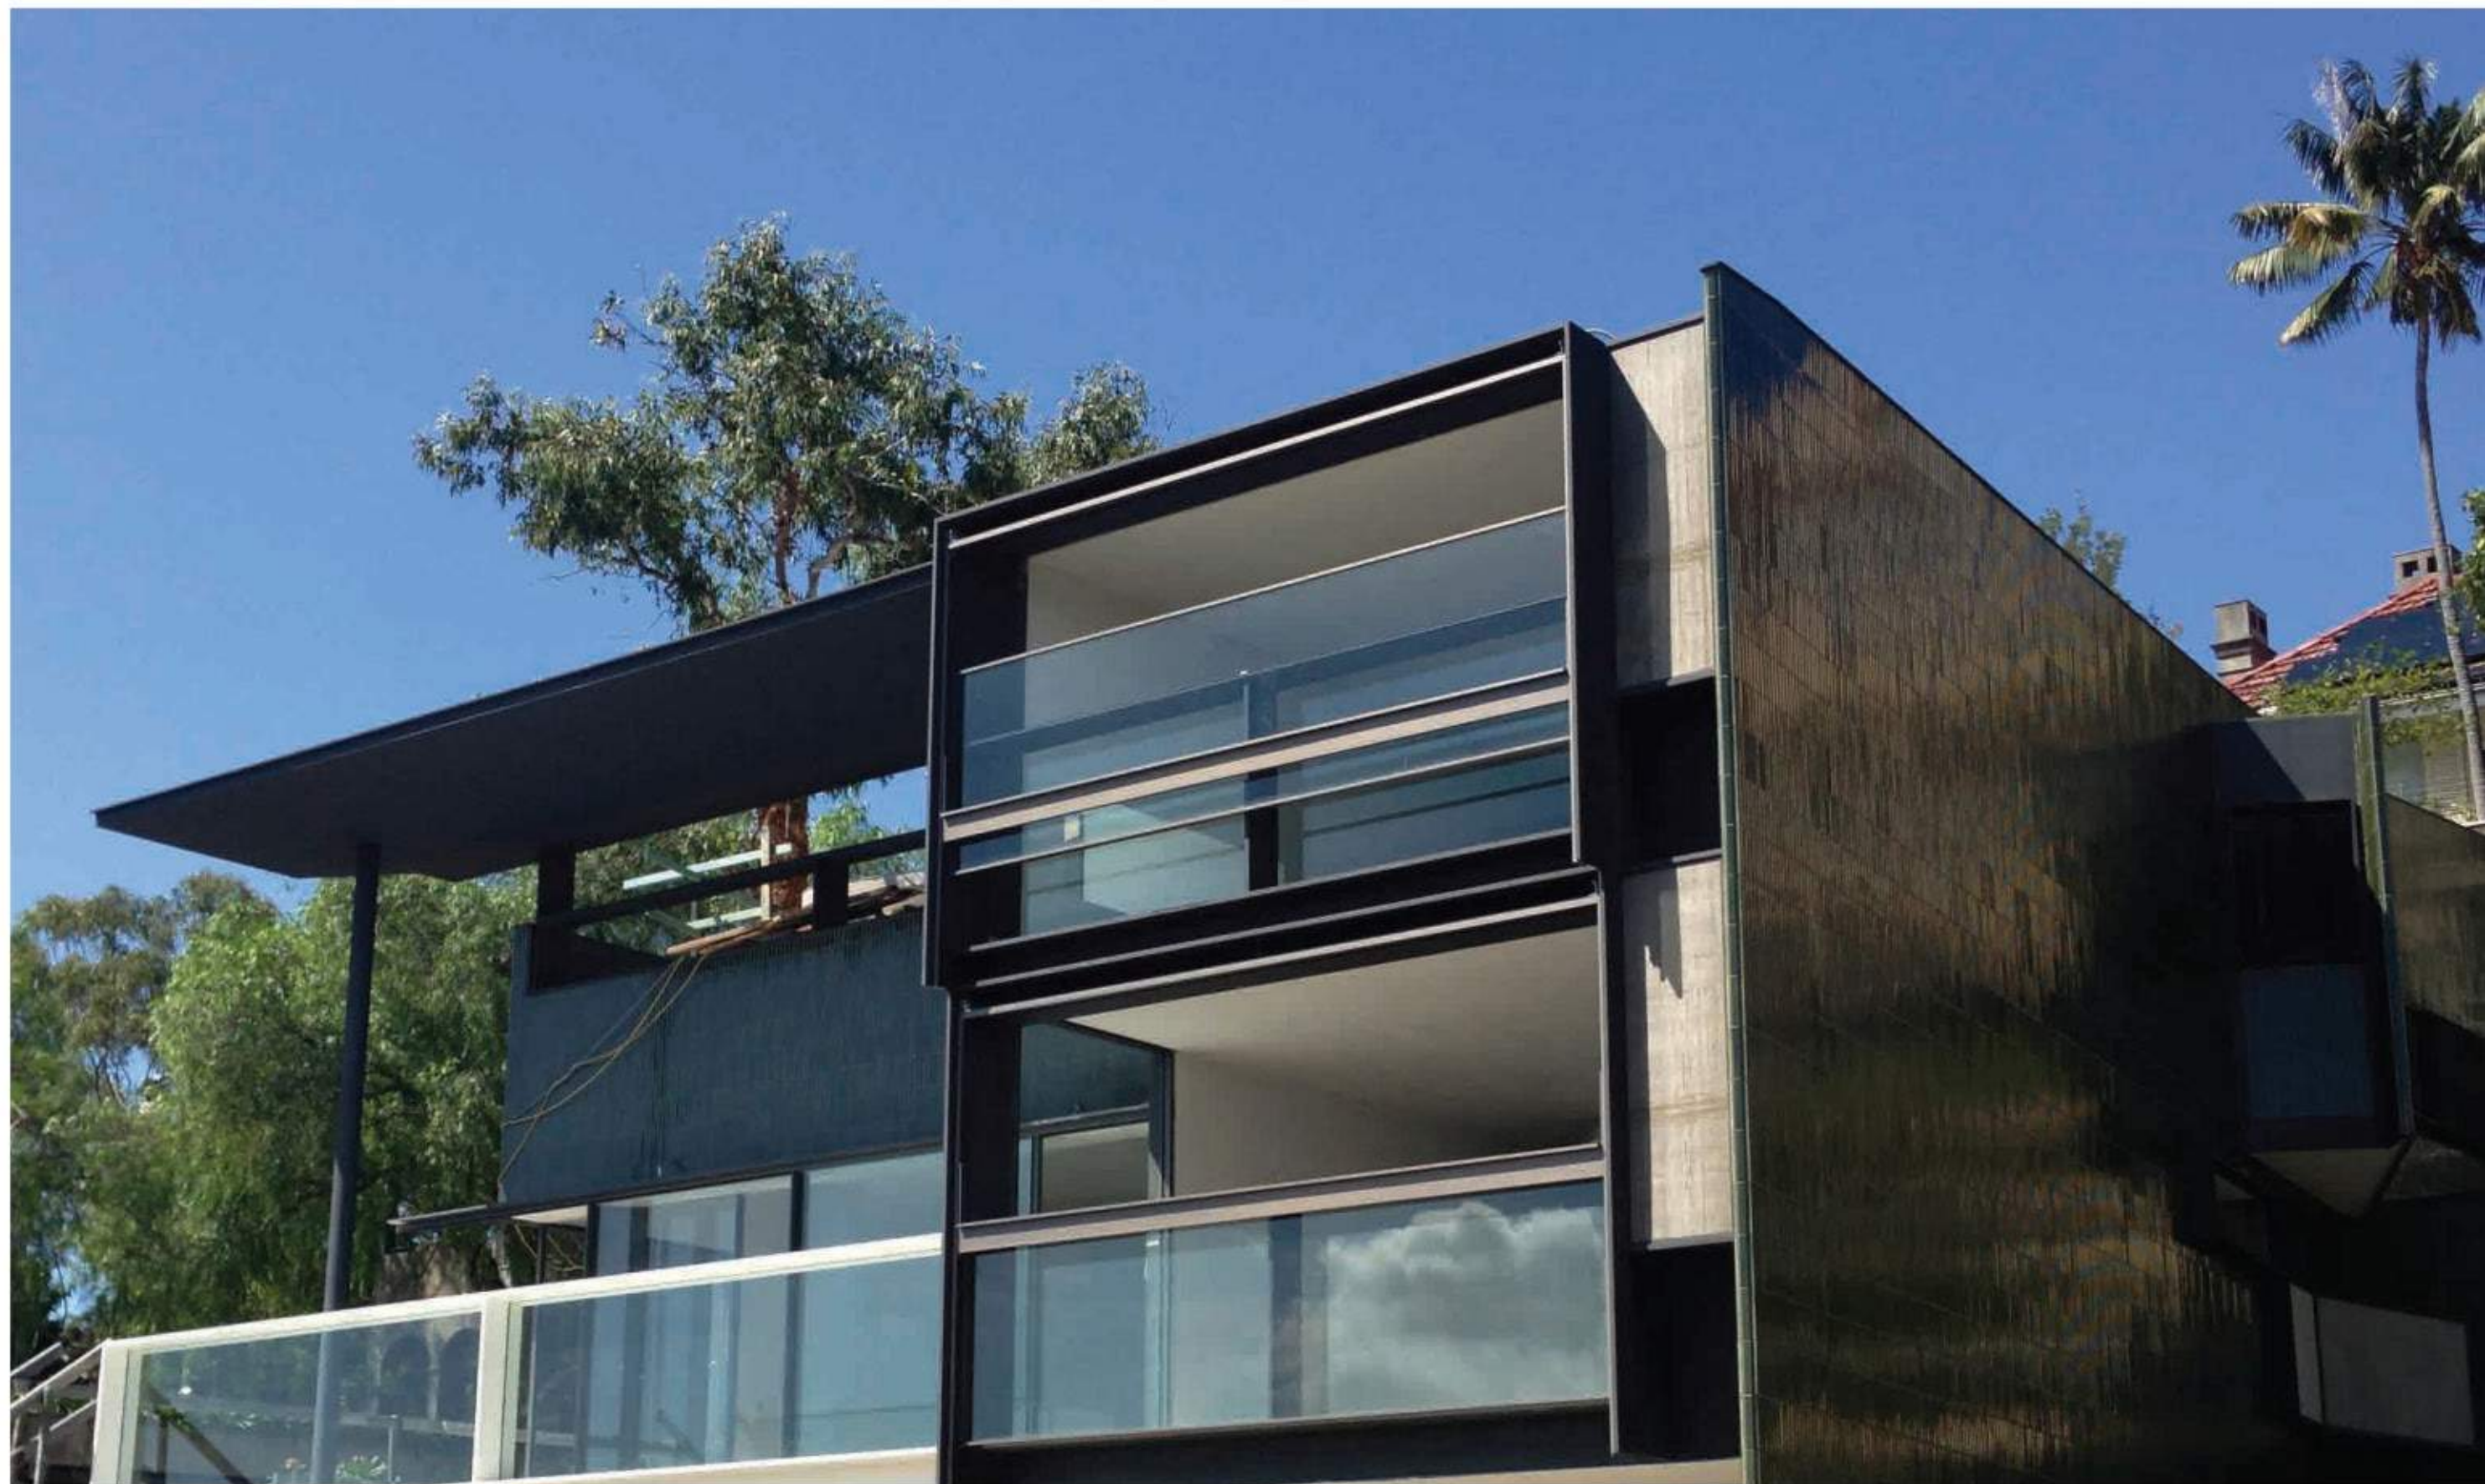

OUR PRODUCTS

09

GUILLOTINE GLASS

Contrary to the typical glass systems, Guillotine Glass Systems make a difference with their vertical movement.

Guillotine Glass Systems, which are often used in terraces, cafés, restaurants and work places, offer uninterrupted panorama to the space with their special design.

It offers a vast view without limitation of the vision with its dynamic structure.

It is user-friendly, and offers top level of comfort close to the nature, and it brings perfect solutions to the spaces with its robust design and wide color range.

Adding value to the area with a perfect design and convenience of use with a remote control, guillotine glass systems ensures reliable use in four seasons with its benefits in top level of heat and sound insulation.

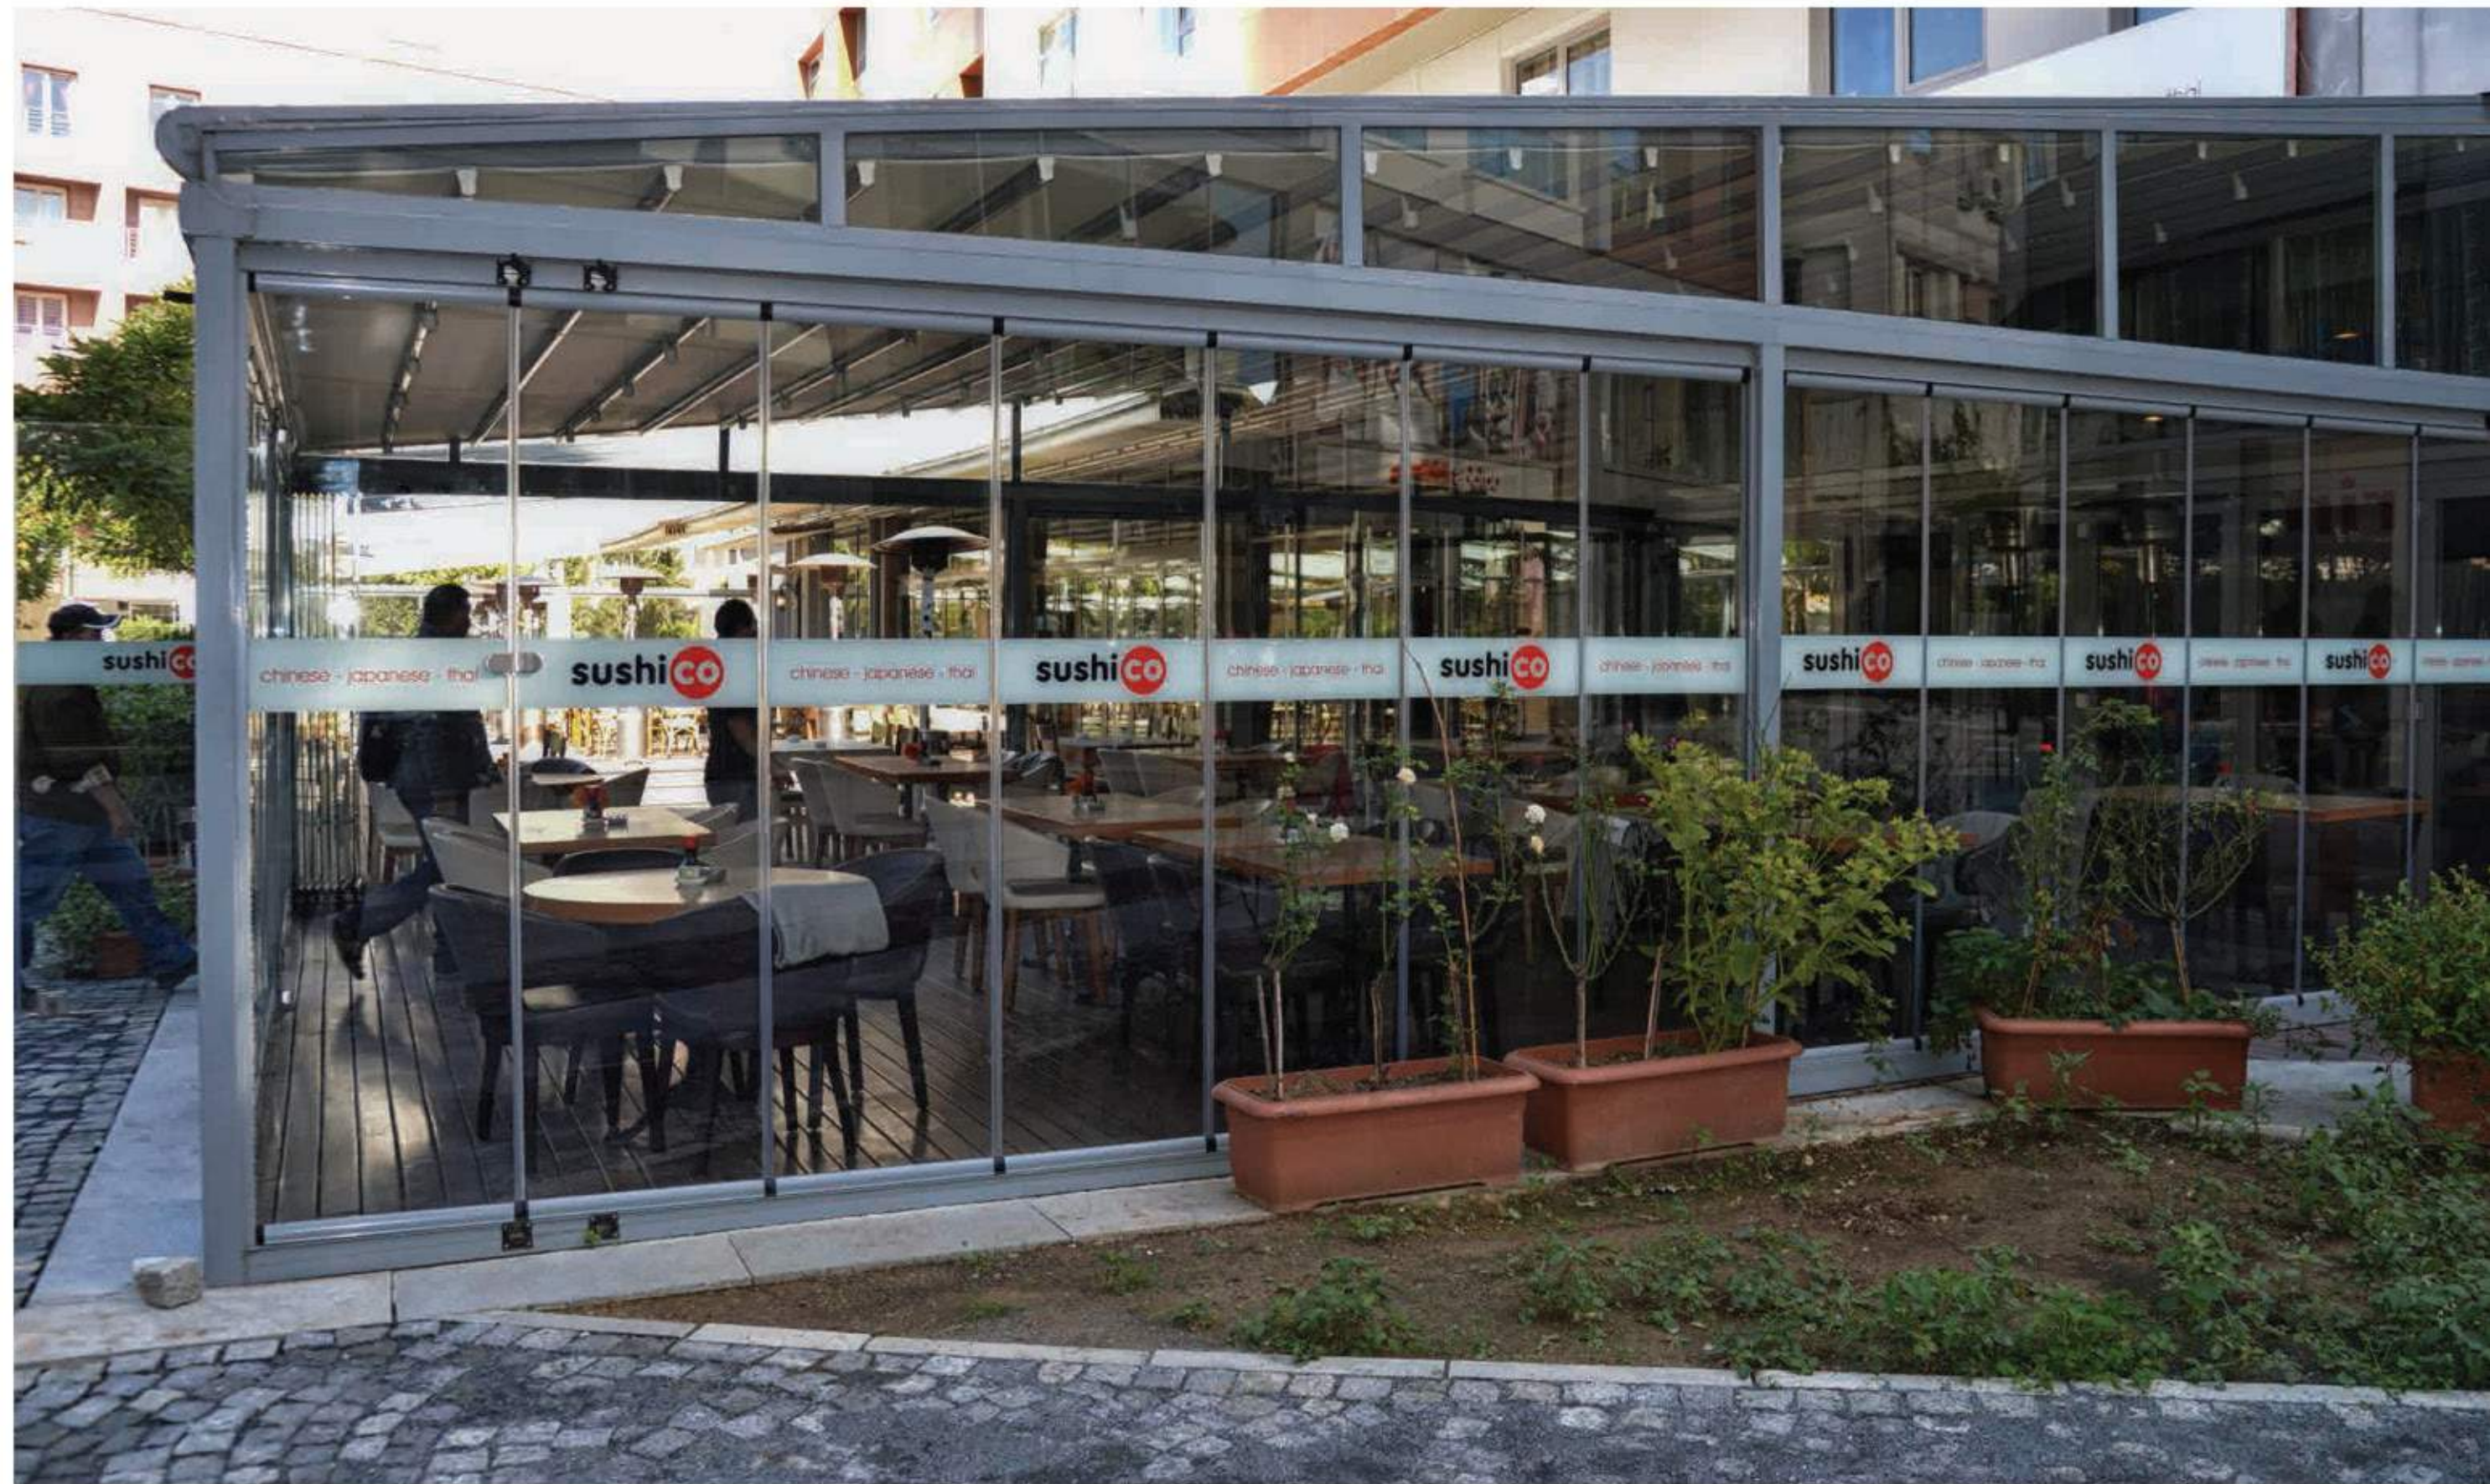

Guillotine Glass Systems create a difference with its special design supported by advance technology, the stylish and aesthetic look of glass panels, and satisfies all visual and functional expectations with its specifications.

OUR PRODUCTS

10

FOLDING GLASS

Folding Glass Systems are the most aesthetic means of creating functional and stylish spaces at homes, work places and other areas.

Folding Glass can be kept closed in adverse weather conditions, ensuring effective protection against adverse external factors.

It can be completely opened in favorable weather, and can be used as an outdoor area.

Folding Glass Systems allow using the space in the most functional way in four seasons.

Its robust and strong structure contributes to sound and heat insulation.

It offers a stylish look that suits your space with its color and design options.

It adds visual value to spaces with its architectural design and profile and glass coloring options for your concept, and ensures you enjoy your space without interrupting with the outside view.

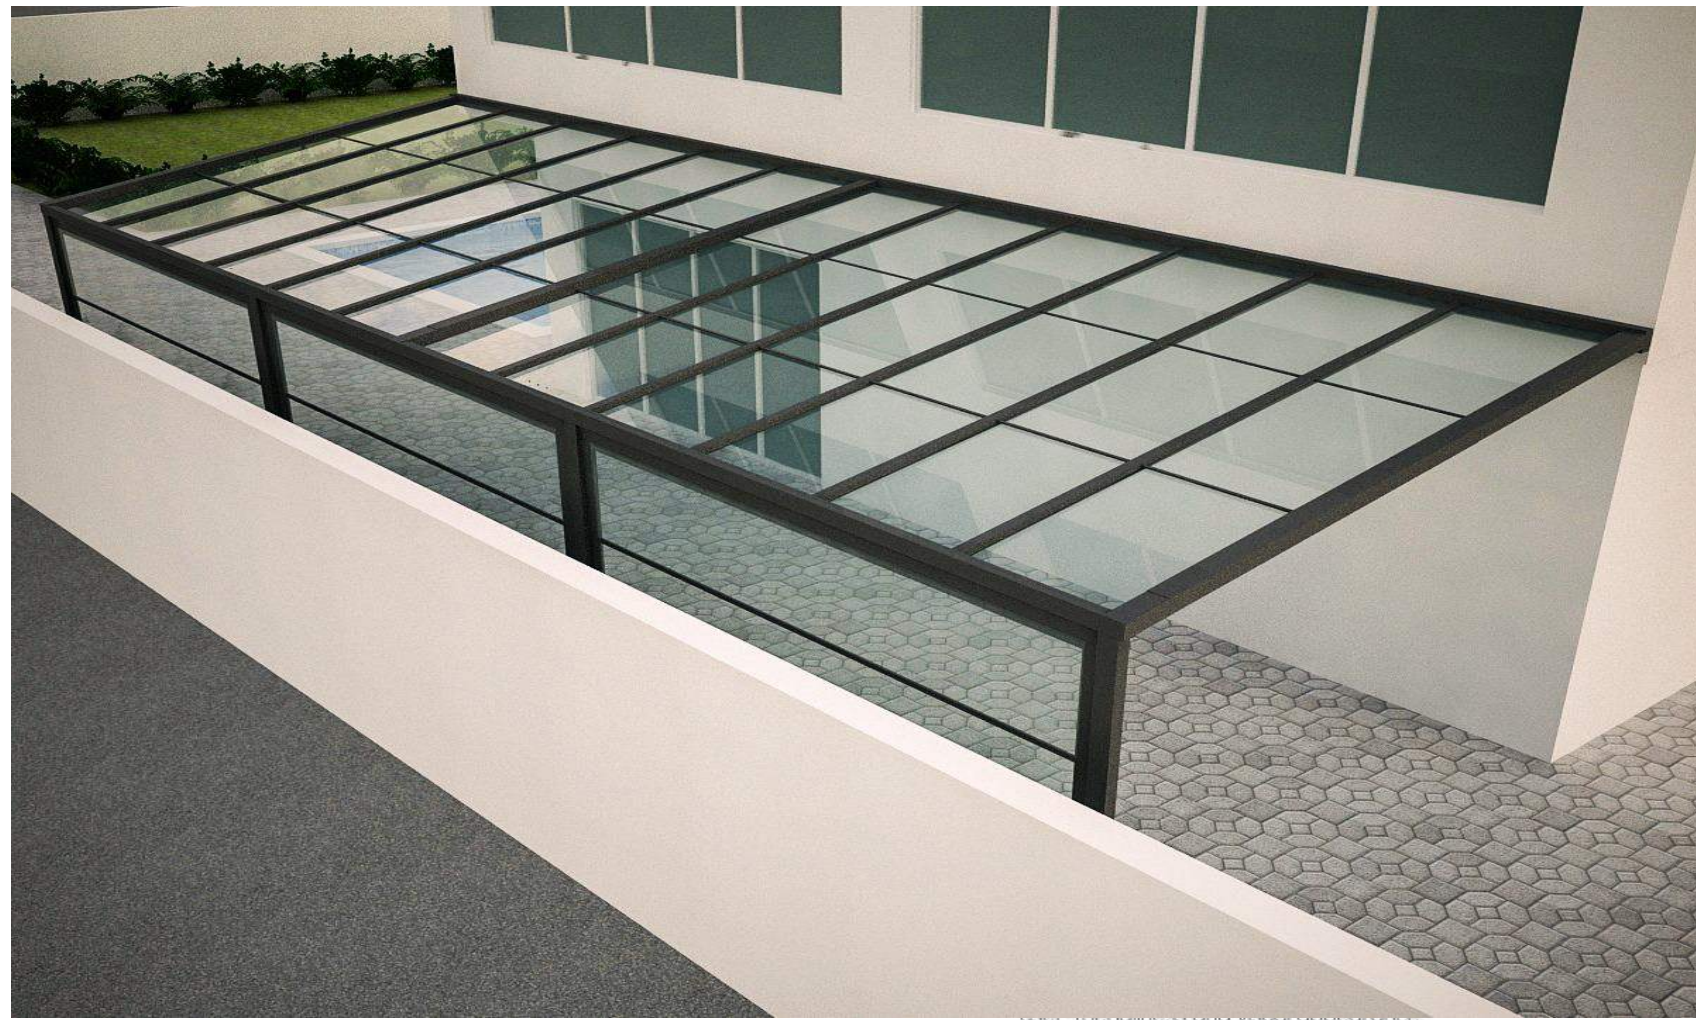

OUR PRODUCTS
